

GARTNER DIGITAL WORKPLACE SUMMIT · LONDON

# AI won't transform your org. *People will.*

What it actually takes — beyond the tech stack

Mark Strande

Global CXO · Wongdoody

## ● THE REAL PROBLEM

# Productivity is not the same as *transformation*

Most organisations have individuals using AI to move faster.  
The rest of the organisation? Still moving at the same speed.

You get faster silos. Not a faster company.

Closing that gap isn't a technology problem.  
It's a trust and engagement problem.

## ● DOMAIN EXPERTS

# They feel the stopwatch running on their *own job*

Specialists who've mastered a process over 10, 15, 20 years are asked to map it out for an agent.

The reframe that works:

They're not training a replacement —  
they're becoming the steward of it.

Nothing gets automated once and left. The person who understands the domain is the most valuable person in the AI's ongoing evolution.

3

## ● GOVERNANCE

Nobody has the  
*recipe* yet.  
Anyone who says  
otherwise is selling.

Over-controlled: guardrails so tight the capability becomes unusable.

Under-controlled: 10,000 rogue agents — impressive and alarming in equal measure.

The right answer is iterative. Bring legal, security, IT, and business into one room. Make a decision in 30 minutes. Document it. Move.

4

## ● THE PROTOTYPE TRAP

# A slick prototype can quietly become *unworkable*

A client came to us with a vibe-coded prototype: "Build me that."

No backlog. No brief. The prototype had accumulated features until the experience was overloaded.

What should have been a clean customer journey had become a mess.

Speed of prototyping is real. But without structured design underneath, you're building on sand.

5

## ● WHAT ACTUALLY WORKS

# Design the process *first.* Then build.

Run full human-centred design before anyone writes a line of code:

User research → team alignment → priorities → user journeys → AI-assisted mapping → shared board → build environment.

The output is structured. The decisions are traceable.

Everyone from security to privacy to product can see they were consulted and that their inputs shaped the outcome.
